

Problem 1.

Without using a calculator, sketch the graphs of the conics in parts (a), (b) and c.

(a) $3x^2 + 2y^2 = 6$

(b) $x^2 + y^2 + 4x - 2y - 20 = 0$

(c) $4(y - 1)^2 - x^2 = 4$

State a transformation that will transform the graph of (a) to a circle with centre $(0, 0)$ and radius $\sqrt{3}$.

Solution**Part (a)****Part (b)**

Part (c)

Problem 2.

The curve C has parametric equations

$$x = t^2 + 4t, \quad y = t^3 + t^2$$

Sketch the curve for $-2 \leq t \leq 1$, stating the axial intercepts.

Solution
